

The screenshot shows the NetBeans IDE 8.2 interface with the BABINTERSPACE project open. The main editor window displays the `ActivityLampu.java` file, which implements the `BABINTERSPACE` interface. The code includes comments in Indonesian and implements methods for controlling a lamp (hidupkanLampu, matikanLampu, redupkanLampu) and constants for lamp states (LAMPU_REDUP, LAMPU_MATI, LAMPU_REDUP).

The left sidebar shows the project structure, including the `BABINTERSPACE` package and its sub-packages: `default package`, `Test Packages`, `Libraries`, `Test Libraries`, and `Interface`. The `Interface` package contains the `BABINTERSPACE` interface.

The bottom status bar shows the command: `ant -f D:\QUTASR\pbo\BABINTERSPACE\build\build-jar.properties`.
